**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of claims 12-16 (Group II) in the reply filed on 4/7/08 is acknowledged.
2. Claims 1-11 and 17-22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected without, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 4/7/08.

***Priority***

3. Receipt is acknowledged of papers (Taiwan 92123622, filed on 8/27/03) submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Information Disclosure Statement (IDS)***

4. No IDS was filed by applicant.

***Claim Rejections - 35 USC § 112***

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 12-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 12 recites the limitation "said transducer." There is insufficient antecedent basis for this limitation in the claim.

Claims 14 and 15 are rejected because the terms, "resonance frequency," in claim 14 and "resource frequency shift" are not clear. Are these terms referring to the same type of signal?

***Claim Rejections - 35 USC § 102***

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. **Claims 12-16** are rejected under 35 U.S.C. 102(b) as being anticipated by Lewandrowski et al. ("Lewandrowski," US Pub. No. 20020137082).

Lewandrowski discloses a biosensor for measuring bone mineral density comprising: a stimulating source (i.e. laser); a substrate having at least on cantilever beam disposed thereon, wherein the surface of said cantilever beam is immobilized with antibodies against TRAP 5a, TRAP 5b or total TRAP; a signal detecting unit (i.e. position sensitive detector) for detecting signal changes from said transducer; and a signal processing unit for retrieving and analyzing said signals. (i.e. para. [0010], [0024], [0036], [0082], [0104], [0159]).
